

大葉大學 九十二 學年度 研究所碩士班 招生考試試題紙

系 所 別	組 別	考 試 科 目 (中文名稱)	考 試 日 期	節 次	備 註
電機工程研究所	乙組	系統理論	4月13日	第三節 13:30~15:00	共二頁 P2-1

注意事項：

1. 考題分兩部份共十題可任選五題作答，每題 20 分。不得超過 5 題作答，只前五題算分。只能選大題，不可選小題。
2. 標明題號依序作答。
3. 可以使用尺、量角器及不可程式之計算機(Calculator)。

PART I: (Computer systems) 1--5

PART II: (Control systems and Digital controls) 6--10

1. (a). Describe the seven-layer structures of OSI (Open System Interconnection). (b). What are the advantages and disadvantages of the compilers versus interpreters ?
2. Convert the following numbers to different number systems (a). $(6954)_{10} = (?)_8$ (b). $(A046B)_{16}$ to $(?)_2$ (c). $(123.44)_8 = (?)_7$ (d). $(11101.0101)_2 = (?)_{16}$
3. Given a Boolean function $F(A,B,C,D) = (A'D' + B)C' + (A'C' + B)(A'C' + D)$, (a) minimize the Boolean function $F(A,B,C,D)$ and express the result in terms of sum of products and (b) construct the Boolean function $F(A,B,C,D)$ using minimum number of 2-input NAND gates.
4. Give a short explanation of the following terms. (a). DMA (b). Cycle stealing (c). Memory-mapped I/O and CPU-controlled I/O (d). Pipelining operation.
5. Design a recursive C program Factorial(k) that computes a factorial of a given positive integer k . (Note that Factorial(0) returns 1 and Factorial(n) returns $n!$)
6. Given a closed-loop transfer function $G_{clo}(s) = 75 / (s^3 + 24s^2 + 83.75s + 75)$, use Root Locus technique to find the closed-loop poles of $G_{clo}(s)$.
7. The state equation is $dx/dt = Ax + Bu$, with $A = \begin{bmatrix} -2 & 2 \\ +0 & -4 \end{bmatrix}$, $B = \begin{bmatrix} 1 \\ 2 \end{bmatrix}$, find $\exp(At)$.
8. Given a plant, $G(s) = 10 / [(s+1)(s+2)]$, design state feedback K for the plant to yield a 15% overshoot [$\xi = 0.55$] with a settling time [2%,

系 所 別	組 別	考 試 科 目 (中文名稱)	考 試 日 期	節 次	備 註
電機工程研究所	乙組	系統理論	4月13日	第三節 13:30 ~ 15:00	共=頁 P2-2

註：考生可否攜帶計算機或其他資料作答，請在備註欄註明（如未註明，一律不准攜帶）

$T_s=4.6/(\zeta * \omega_n)$ of 1 second. You have the right to choose your states.

9. Use Bode plots to find Gain Margin and Phase Margin of an open-loop transfer function

$$G_{open}(s)=32(s+0.5)/[(s+0.02)(s^2+6s+8)]$$

Refer to Figure 1.

10. Given $D(z)=(0.3864z-0.3163)/(z-0.135)$ and $G(s)=1/s^2$ with sampling time=1 second, convert $G(s)$ to $G(z)$ first. $G(z)=?$ Then what is the closed-loop transfer function of the system in z-domain?

Figure 1.
